KALIVARAPU SUDHIR KUMAR

.NET Full Stack Developer | React.js & TypeScript

Hyderabad, India | +91 8106039548 | kalivarapuskumar@gmail.com | linkedin.com/in/sudhir-kalivarapu-b63155236

PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of experience building and maintaining production web applications end-to-end using ASP.NET Core (.NET 8), C#, React.js, TypeScript, and PostgreSQL. Comfortable across the stack: designing RESTful APIs and Dapper-based data access on the backend, and building reusable, accessible React/Redux Toolkit interfaces on the frontend. Experience spans healthcare technology, SaaS association management, and insurance aggregation platforms, contributing to API development, database query optimization, authentication/authorization, and UI performance. Leveraging Azure cloud services and writing automated unit tests using xUnit/NUnit to maintain code quality..

TECHNICAL EXPERTISE

Backend: ASP.NET Core (.NET 8), C#, Node.js, Express.js, RESTful API Design, Microservices Architecture, Dapper ORM, Entity Framework (learning), Domain-Driven Design

Frontend: React.js, TypeScript, JavaScript (ES6+), Redux/Redux Toolkit, Next.js, Material-UI, Tailwind CSS, HTML5, CSS3, Responsive Design, SPA Architecture, Accessibility

Database: PostgreSQL, Query Optimization, Schema Design, Indexing Strategies, Connection Pooling, CTEs & Window Functions

Auth & Security: JWT-Based Authentication, Role-Based Authorization (RBAC), Form Validation, Centralized Error Handling

Cloud & DevOps: Docker, Nginx, CI/CD Pipelines, Git/GitHub/GitLab, Microsoft Azure basics

Testing & Quality: Unit Testing with xUnit/NUnit, Code Reviews, POC Development, API Documentation (Swagger/OpenAPI),Postman

Practices: Clean Architecture, SOLID Principles, Functional Estimation, Agile/Scrum collaboration

PROFESSIONAL EXPERIENCE

.NET Full Stack Developer Aug 2024 – Apr 2026

Communitify Info Technologies Pvt. Ltd.

Products developed at Communitify: Kootami (Association Management SaaS Platform) and Tera Connects (Healthcare Technology Platform) — company transitioned focus from Tera Connects to Kootami as part of a strategic product restructuring; contributed across both.

Product: Kootami — Association Management SaaS Platform

Multi-tenant SaaS platform digitizing association, membership, subscription, event, fundraising, and voting workflows across 9+ major modules (Association, Membership, Subscription, Events, Fundraising/Donations, Digital Voting, Blood Donation, Sponsorship, Stall & Amenities Management).

- Developed and maintained RESTful APIs in ASP.NET Core and C# powering member, subscription, and event management modules, following Clean Architecture, Dependency Injection, and SOLID principles.
- Engineered responsive React.js and TypeScript interfaces with Material UI, Tailwind CSS, and Redux Toolkit for multi-step workflows across Events, Subscriptions, Sponsorships, Stalls, and Amenities modules.
- Engineered a bulk member import module using Excel/OpenXML parsing, with phone number and date-format validation rules and exception handling that flags invalid records for correction instead of failing the whole import.
- Optimized PostgreSQL queries and schema design using Dapper, connection pooling, and CTEs/window functions — including cross-chapter member visibility logic and subscription-status joins across multi-tenant data. Redesigned the event registration schema to eliminate redundant junction tables, simplifying several multi-join queries down to two-table joins.
- Implemented JWT-based authentication, role-based authorization, client-side form validation, and centralized error handling across the platform.
- Rolled out an email notification system with MailTrap integration and timezone-aware scheduling via TZConvert, powering templated event communications across chapters.
- Shipped a standalone Node.js/Express microservice for event check-in via QR code scanning, with a React scanning UI that updates attendee status in the database in real time alongside the main ASP.NET Core backend.
- Created and maintained standalone check-in REST APIs in Express for scanning and validating attendee QR codes, recording admission timestamp and admission type (e.g., VIP, general, staff) against the attendee record.

- Worked in Docker-based environments with Nginx and CI/CD pipelines via Git/GitHub; participated in code reviews, POC development, functional estimation, and API documentation.

Product: Tera Connects — Healthcare Staffing & Technology Platform

Healthcare staffing aggregator connecting hospitals, medical professionals, and service vendors across India. Worked simultaneously across the full product ecosystem — Corporate Website, Client Portal and Admin Portal UI and APIs, and the mobile app APIs — all backed by ASP.NET Core and PostgreSQL.

- Delivered and maintained UI across three concurrent web surfaces (Corporate Website, Client Portal, Admin Portal) using a single shared, reusable React/TypeScript component library with MUI and Tailwind CSS.
- Architected the Admin Portal UI with a focus on scalability and component reusability, and integrated RESTful APIs documented via Swagger to streamline frontend-backend collaboration and reduce integration issues.
- Created modular, shared front-end components adopted across multiple modules to cut code duplication across the Client and Admin portals.
- Extended the same ASP.NET Core backend patterns used across the web portals to power the Tera Connects mobile app APIs.
- Migrated the entire Corporate Website from React to Next.js for server-side rendering and SEO compliance, optimizing meta tags to improve discoverability over the prior client-rendered version, and built a job board module with filtering, search, and alerts backed by paginated PostgreSQL queries.
- Managed application state with Redux Toolkit and JWT-based authentication across staffing, recruitment, and admin workflows, with performance improvements from lazy loading, code splitting, and efficient rendering.
- Collaborated cross-functionally via Git/GitHub and CI/CD pipelines to ship features and resolve production UI issues on a live healthcare platform.

Full Stack Developer Jun 2023 – May 2024

LMVIT

Product: LMV Insurance — an aggregation platform enabling users to compare and purchase insurance policies from multiple providers across Health, Motor, Life, Travel, and General Insurance.

- Built a real-time quote comparison UI integrating third-party insurance provider APIs — including PolicyBazaar, ACKO, and Digit Insurance — letting users compare plans and pricing side by side.
- Architected each provider integration as an isolated microservice, with a separate backend server per provider (PolicyBazaar, ACKO, Digit Insurance) and no direct coupling between them, for seamless independent integration and easier fault isolation.
- Developed the KYC verification workflow end-to-end: document upload, validation states, and status tracking.
- Integrated each provider's own payment gateway following standard security practices, and handled form validation and UI enhancements across the quote-to-purchase journey.

Full Stack Intern

Imaginnovate

Internship

- Built reusable React components using Ant Design, following accessibility and responsive design standards.
- Debugged and resolved UI/frontend issues in collaboration with the development team; contributed to code reviews and frontend best practices.

EDUCATION

Bachelor of Engineering in Electronics and Communication Engineering

Sir C.R. Reddy College of Engineering | June 2017 – June 2021
